# ArcTitan Overview

## SOME HELPFUL INFORMATION ABOUT US AND OUR PRODUCT

### What we do

ArcTitan is an incredibly powerful way to access every single email an organisation has ever sent or received. Year on year, there is substantial growth of email across almost all businesses' infrastructures. That's growth in number of emails, the average size of emails and the importance of emails, leading to longer backups and increased costs to the customer. With a unique indexing algorithm, ArcTitan gives users instant access to any email that they have ever sent or received without any strain on the mail server and without compromising on search response times.

### How ArcTitan works

### Differentiators

#### SUPERIOR FINDABILITY:

- » Lightning fast search and retrieval that makes Outlook seem snail-paced

#### STORAGE REDUCTION:

- » Organisations regularly achieve up to 75% savings in premium storage costs

#### SECURITY:

- » ArcTitan's digital fingerprint technology, high-level encryption and reliable audit trail means you can trust the integrity of any email within your archive

#### COMPLIANCE:

- » Combining a 'never-delete' archive with fast and intuitive searching helps meet the unique regulations that govern your industry

### Why choose ArcTitan for your email archiving?

Compliance has been a long standing part of the Arc Titan message. All organisation need solutions in place to make sure email is compliant and works optimally. Rising email volumes and email data growth rates means organisation must manage ever-expanding mailboxes both from a infrastructure point of view and in terms of remaining compliant.

When email data reaches the point where it is no longer needed on a daily basis but must be retained as an archive for compliance or legal reasons, a cloud email archiving solution like ArcTitan is an obvious solution. ArcTitan allows organisations easily manage this email growth at a fraction of the cost of on-premises archiving systems. With low set-up costs and no infrastructure or expertise required it's the perfect solution for SMBs.
