

Build Powerful DNS Filtering into your Cloud Management Portal

TitanHQ
WebTitan

Why WebTitan DNS Filtering?

WebTitan DNS filtering blocks malware whether your clients are on or off the corporate network. WebTitan is used by thousands of internet service providers to allow, block and manage internet access and increase customers' safety online. It can be easily integrated into your Cloud management portal making it easier to sell and deploy web filtering to your customers.

WebTitan APIs makes it easy

WebTitan provides an open, free-to-use, Application Programming Interface (API) for managed service providers to incorporate the WebTitan DNS filtering solution into their cloud offering. You can build DNS filtering into your infrastructure whether you self-host, use AWS, Azure or other.

Why build WebTitan filtering into your Cloud Management Portal?

- » Low cost of entry allowing you to scale quickly and affordably.
- » Flexible filtering - you can filter for multiple customers with multiple locations. Our flexible APIs mean we can work with you to arrive at the perfect package to suit your individual needs.
- » Instant categorization

Integrating WebTitan DNS Filtering

Are your customers running sports stadia or coffee shops? By integrating WebTitan DNS filtering into your system you can offer your customers web filtering instantly – regardless of size or number of locations.

We have a number of open APIs to integrate our services and reports into third-party products:
We use Rest API's using OAuth1 which is simple and quick to roll out. We provide you with the full API set.
Full API information is available here : <http://apidoc.webtitancloud.com/>

Summary of Benefits for MSPs

- » Per user and per group reporting
- » 53 predefined categories with the option for clients to make their own domain white and blacklists
- » Easy client account administration via a central control panel
- » One control panel to manage all clients
- » Intuitive controls with low management overhead
- » Eliminates the need for site visits, with no local support required
- » No end user software installations needed
- » Incorporate new clients and new WiFi hotspots in minutes
- » Cost-effective pricing with no additional hardware purchases required
- » Three hosting options: Our servers, private cloud, or within an MSP's infrastructure
- » Usage-based pricing with monthly billing
- » Generous margins for MSPs
- » Industry-leading technical support and customer service
- » Our web content filter for MSPs is available in a white label version

For many MSPs, finding all these features in the same product is a difficult and time-consuming process. Our cloud web filtering solution for MSPs offers all these features and removes the hassle from implementing, maintaining, and managing a web filter for multiple clients. WebTitan allows managed service providers to seamlessly integrate web filtering into their existing client packages in order to increase client revenue and attract new business.

Get in touch today to find out more about how you can benefit from competitive pricing strategies and aligned monthly billing cycles by downloading our MSP Alliance Program brochure. Alternatively, if you would like to discuss becoming a TitanHQ Certified Partner visit our MSP Alliance page (<https://www.titanhq.com/webtitan-msp-alliance>) on TitanHQ.com.
