

What is WebTitan Cloud?

WebTitan Cloud is a cloud based web filtering service which allows you to monitor, control and protect your business and users from online threats.

WebTitan Cloud allows you create a granular policy for your users to control internet access and block malware in your organisation. Comprehensive reporting allows you see internet activity in real time and also choose from a large number of predefined reports on usage.

The cloud based solution checks your DNS request against a predefined policy, thus allowing or blocking access to the requested URL. Only requiring a simple DNS redirect to the WebTitan servers makes set up simple and quick, allows for scale and eliminates latency.

Content control and malware protection for business

The internet is critical to the majority of businesses nowadays. Unfortunately, malicious websites, spyware, and viruses present real threats to the business that just can't be ignored. There is also a growing need for companies to filter content in order to protect their employees from unsavoury content or cut down on bandwidth costs.

WebTitan protects organisations from threats by managing the organisations internet traffic. It can regulate the content employees can access, protect the network from malware and malicious attacks online and control bandwidth usage.

The basic configuration for customers requires no software installation and it can be set up and operational in a matter of minutes making it an ideal solution for any organisation.

Why use WebTitan Cloud?

WebTitan Cloud has been purpose built to offer robust control and protection to users, while being extraordinarily easy to set up and manage.

The solution is designed to integrate easily into the existing infrastructure and deployment is very straightforward. It allows the administrator to set up the solution and forget about it, as it protects your users from malicious websites, and inappropriate sites.

WebTitan Cloud customers include

- » Businesses who want to protect their users and their network from dangerous or inappropriate websites.
- » Educational institutions who want to stop students and staff from accessing websites containing unsuitable content.
- » Public wifi providers who want to limit access to unsavoury content in public places and control bandwidth.

WebTitan is a robust, low management solution that integrates easily and can be deployed quickly.

Product features

Cloud based

Deployed as a cloud based service, it is a DNS based solution requiring simple DNS redirect to the WebTitan servers. This makes it simple to set up and manage. It facilitates scale and eliminates latency.

Malware & phishing protection

Protect your network from malware and phishing attacks with WebTitan's categories of malware protection. WebTitan will block access to compromised websites, malicious websites, spam based websites and spyware.

Policy exceptions (Cloud Keys)

WebTitan Cloud allows the administrator to create exceptions to the general internet policy. Known as Cloud Keys; they can be created instantly and allow the user to bypass a policy rule. Each Cloud Key can be created for single or multiple users, controlled by time or date.

URL filtering

WebTitan Cloud filters website URLs into 53 predefined categories such as social media, news, pornography, gambling etc. The system contains over 500 million website addresses in 200 languages, each sorted into the predefined categories. Combined with cloud based look up, users get highly accurate and flexible filtering based on the website's content.

Flexible policy creation

Using WebTitan Cloud you can easily create and manage your own policy to protect your users, including whitelists and blacklists of URL's and domains.

Reporting

Customers have access to a full suite of over 50 predefined reports on user or group activity. Real time browsing activity can also be viewed. These reports can be scheduled, or exported in multiple formats.

Product features

User identification

Use the WebTitan DNS Proxy in conjunction with WebTitan Cloud to identify individual users and report on their activity. The WebTitan DNS Proxy is a small install on premise or in a virtual environment which integrates with active directory or LDAP to allow you to create per user or per group reporting for your organisation. This allows for more granular control and reporting.
