

DNS Filtering for SMBs

Leading DNS- Bases web filtering solution.

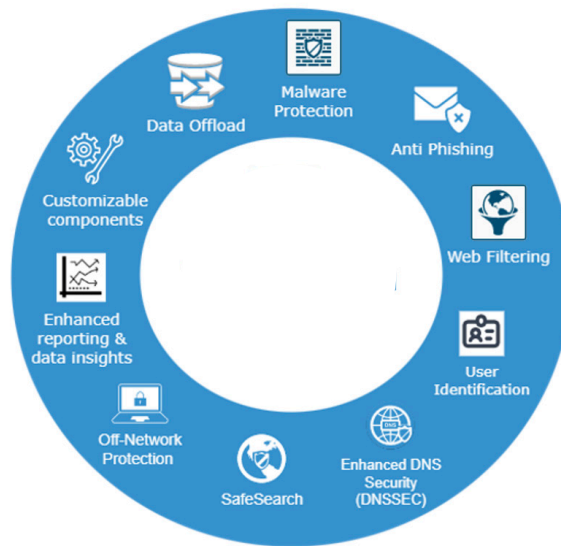

This cloud-based web filtering solution provides complete protection from online threats such as viruses, malware, ransomware, phishing, and comprehensive content filtering. A low-maintenance solution that can be set up in five minutes to stop users from accessing inappropriate online content.

Customer Quote

“After 16 years working as a network administrator, the DNS Filter has been the best product I have implemented! It is highly granular, easily modified and technical support is quick to respond, very polite, thorough and will follow up with the customer to ensure all is working properly.”

Mr. Tim Maples, Network Administrator, WILL LOU GRAY OPPORTUNITY SCHOOL

WebTitan Features

Filtering

- Comprehensive set of predefined threat categories, with the ability to create custom categories.
- Threat categories are fully managed and updated using an AI-based classification engine and human quality assurance to categorize and validate content accurately.
- The classification engine provides Premium URL classification and best-in-class, market-leading accuracy and coverage, spanning more than 99% of the ActiveWeb.
- Customizable block page.
- Roaming agent for off-the-network filtering, suitable for remote employees and children on school devices.

Policies

- A filtering policy can be applied to a user, user group, location, and device.
- Use the system default policy or create your custom policies.
- Per policy, Safe Search settings protect against explicit search results, including thumbnail images on Google, Bing, and YouTube videos.
- Active directory groups can be imported and have a policy applied.

Extensive APIs

- Offering a robust REST API set with our dedicated infrastructure, allowing you to easily incorporate DNS filtering and customer onboarding directly into your existing cloud offering.

Off-Network Protection

- Off-network filtering and policy implementation are available using OTG roaming agents, with Windows, Mac, and Chromebooks support.
- User requests can be identified with Active Directory integration or roaming agents to give better reporting and more granular control.

User Identification

- Multiple user identification methods available, with support for both Microsoft Active Directory & Azure AD.
- User requests can be identified with Active Directory integration or WebTitan roaming agents to give better reporting and more granular control.

Reporting

- Extensive set of predefined and fully customizable reports available.
- Real-time browsing view to assist with monitoring and troubleshooting.
- At-a-glance dashboard provides an overview of system performance and user activity.
- Enable email notifications to be informed when there is an attempt to access a blocked category.
- Export report data

Easy to Setup & Configure

- 100% cloud-based, no software installation required.
- DNS-based solution that only requires a simple DNS redirect to your DNS Filtering server.
- Flexible deployment options: SaaS, dedicated infrastructure, and roaming agents for off-network protection.
- Easy navigation between customer accounts.

Classification Categories

Five hundred unique categories combine into 53 groupings for ease of management.
